## Halves <br> Cross Off

## Directions:

1. Both players spin the spinner. Highest number goes first.
2. Spin the spinner. Subtract HALF of the number you land on. (Example: Land on 14 , half of it is 7 because $7+7=14$.)
3. If the difference is in one of your boxes, cross the number off. If not, turn is lost.
4. The first player to cross off all of their numbers wins.
